Contributors

This book is really the outcome of intensive collaboration within ITC. All those that have contributed in terms of the contents are mentioned at the individual chapters. At this place, we would like to acknowledge those people who have given an additional contribution. In the first place we like to mention the encouragement given by the previous rector at ITC, Martien Molenaar. The text is based on earlier versions of teaching materials to which many others have anonymously contributed. The LaTeX class used to produce this book was designed by Rolf de By. The figures have been compiled under the guidance of Wim Feringa, and author's editing was provided by Ian Cressie. We would like to acknowledge the contributions of them all. Finally, Teresa Brefeld, Ronnie Geerdink, Gerrit Huurneman, Fred Paats and many others are thanked for their practical support during the compilation process.

Valentyn Tolpekin Alfred Stein

Contents

Introduction **21**

1 System Earth: some theory on the system **33**
1.1 Systems . . . 35
1.2 Models . . . 41
1.3 Some simple models . . . 48
1.4 System Earth and governance . . . 54
1.5 A systems view of Earth processes: some examples . . . 59
1.6 Concluding remarks . . . 67

2 Physics **71**
2.1 Waves and photons . . . 72
2.2 Sources of EM radiation . . . 73
2.3 Electromagnetic spectrum . . . 76
2.4 Interaction of atmosphere and EM radiation . . . 77
2.5 Interactions of EM radiation with the Earth's surface . . . 80
2.6 Sensing of EM radiation . . . 84

3 Spatial referencing and satellite-based positioning **93**
3.1 Spatial referencing . . . 93
3.2 Satellite-based positioning . . . 113

4 Sensors **125**
4.1 Platforms and passive electro-optical sensors . . . 125
4.2 Thermal remote sensing . . . 137
4.3 Imaging Spectrometry . . . 139
4.4 Radar . . . 144
4.5 Laser scanning . . . 153
4.6 Aerial photography . . . 160
4.7 Selection of sensors for a process study . . . 165

5 Pre-processing **167**

5.1 Visualization and radiometric operations . . . 167
5.2 Correction of atmospheric disturbance . . . 186
5.3 Geometric operations . . . 190

6 Image analysis **205**
6.1 Visual image interpretation . . . 205
6.2 Digital image classification . . . 213

7 Models and modelling **227**
7.1 What is a model? . . . 227
7.2 Function and use of models . . . 229
7.3 Modelling . . . 230
7.4 General characteristics of models . . . 231
7.5 How to build a model . . . 231
7.6 Modelling in GISs . . . 233

8 Spatial data modelling, collection and management **237**
8.1 Geographic Information and spatial data types . . . 237
8.2 Data entry . . . 262
8.3 Data preparation . . . 270
8.4 Data management and processing systems . . . 276
8.5 GIS Working environment . . . 290
8.6 Data quality . . . 297
8.7 Spatial variation and interpolation . . . 305

9 Analysis and Process modelling **313**
9.1 Classification of analytical GIS capabilities . . . 313
9.2 Measurement, retrieval and classification . . . 315
9.3 Overlay functions . . . 325
9.4 Neighbourhood functions . . . 331
9.5 Network analysis . . . 339
9.6 Error propagation in spatial data processing . . . 342

10 Visualization and dissemination **347**
10.1 Visualization . . . 347

11 Data integration **373**
11.1 Introduction . . . 373
11.2 Observation models and process models . . . 375
11.3 The *multi* concept in remote sensing . . . 379
11.4 Spatial, temporal and spectral scales . . . 383
11.5 Data integration issues in GISs . . . 387

11.6 Change detection 387
11.7 Case study: Climate change 391
11.8 Case study: Flood modelling: Nam Chun (Thailand) 399
11.9 Case study: Environmental management plan for the Lake Uromiyeh ecosystem, Iran 419

12 Use and Users **427**
12.1 The users of route planning and navigation systems 430
12.2 The users of early warning systems 438
12.3 Monitoring coastal vegetation 448
12.4 Nature conservation 457
12.5 Information Exchange for Spatial Planning 466
12.6 Participatory use of GIS 471
12.7 Concluding remarks on users and user requirements 480

References **483**

Glossary **491**

List of Figures

1 The concept of the core . . . 24
2 Modelling the real world to support solving geo-related problems . . . 26
3 Modelling requirements and GIS . . . 27
4 The GeoData Infrastructure as working environment . . . 28

1.1 Elements and interactions . . . 37
1.2 Hierarchies in systems . . . 39
1.3 The modelling process . . . 44
1.4 Conceptual model of a socio-economic and ecological system . . . 50
1.5 FCM for a simple Lake system . . . 51
1.6 Two models (maps) of the same spatial area . . . 51
1.7 A Stella model of a cascade of reservoirs and their feeding watersheds 52
1.8 Results of an agent-based model . . . 53
1.9 The policy cycle . . . 57
1.10 The water cycle . . . 61
1.11 The carbon cycle . . . 63
1.12 The nitrogen cycle . . . 64
1.13 Growth in the world's rural and urban population . . . 65
1.14 GHG emissions by sector in 2004 . . . 66
1.15 GEOSS nine areas of societal relevance . . . 69

2.1 Electromagnetic waves . . . 72
2.2 The spectrum of light . . . 72
2.3 Relationship between wavelength, frequency and energy . . . 73
2.4 Illustration of Planck's radiation law . . . 75
2.5 The EM spectrum . . . 76
2.6 Interactions of EM radiation with the atmosphere and the Earth's surface 77
2.7 Atmospheric transmittance . . . 78
2.8 Radiation curves of the Sun and a black body . . . 79
2.9 Rayleigh scattering . . . 79
2.10 Rayleigh scattering affects the colour of the sky . . . 79
2.11 Effects of clouds in optical remote sensing . . . 80

2.12 Specular and diffuse reflection . . . 81
2.13 Reflectance curve of vegetation . . . 83
2.14 Reflectance curves of soil . . . 83
2.15 Reflectance curves of water . . . 83
2.16 Active sensor versus passive sensor . . . 85
2.17 Radiance at the sensor . . . 86
2.18 Spectral reflectance curves and spectral bands of some multispectral sensors . . . 86
2.19 8 bits versus 1 bit radiometric resolution . . . 87
2.20 Digital image file . . . 88
2.21 Overview of sensors . . . 89
2.22 Landsat-5 TM false colour composite . . . 90
2.23 'Thermal image' of a coal mining area . . . 91
2.24 Pictorial representation of a digital surface model . . . 91
2.25 ERS-1 SAR image of the Mahakam Delta, Kalimantan . . . 92

3.1 Two reference surfaces approximating the Earth's surface . . . 94
3.2 The Geoid . . . 94
3.3 Levelling network . . . 95
3.4 An oblate ellipse . . . 96
3.5 Regionally best fitting ellipsoid . . . 97
3.6 Dutch triangulation network . . . 98
3.7 The ITRS and ITRF . . . 99
3.8 Height above the geocentric ellipsoid and above the Geoid . . . 100
3.9 2D geographic coordinate system . . . 101
3.10 3D geographic coordinate system . . . 101
3.11 3D geocentric coordinate system . . . 102
3.12 2D cartesian coordinate system . . . 103
3.13 Coordinate system of the Netherlands . . . 103
3.14 2D polar coordinate system . . . 104
3.15 Projecting geographic into cartesian coordinates . . . 105
3.16 Classes of map projections . . . 106
3.17 Three secant projection classes . . . 106
3.18 A transverse and an oblique projection . . . 107
3.19 Mercator projection . . . 108
3.20 Cylindrical equal-area projection . . . 108
3.21 Equidistant cylindrical projection . . . 109
3.22 Changing map projection . . . 110
3.23 Changing projection combined with a datum transformation . . . 111
3.24 Determining pseudorange and position . . . 114

3.25 Satellite positioning . . . 115
3.26 Positioning satellites in view . . . 118
3.27 Geometric dilution of precision . . . 119
3.28 GPS satellite constellation . . . 122

4.1 Attitude angles and IMU attached to an aerial camera . . . 127
4.2 Meteorological observation by geostationary and polar satellites. . . . 129
4.3 Matrix and linear array CCD chips . . . 130
4.4 Principle of imaging by a line camera . . . 130
4.5 Normalized spectral response curves . . . 131
4.6 Pixel, GRC, GSD—for digital cameras . . . 133
4.7 Principle of an across-track scanner . . . 134
4.8 Ground resolution cell of NOAA's AVHRR . . . 135
4.9 The principle of stereoscopy . . . 136
4.10 ASTER thermal image of coal fires in Wuda, China . . . 139
4.11 Imaging spectrometry concept . . . 140
4.12 Kaolinite spectrum at various spectral resolutions . . . 141
4.13 Effects of different processes on absorption . . . 142
4.14 Principle of active microwave remote sensing . . . 144
4.15 From radar pulse to pixel . . . 146
4.16 Microwave spectrum and band identification by letters . . . 146
4.17 Radar remote sensing geometry . . . 147
4.18 Slant range resolution . . . 148
4.19 Geometric distortions in a radar image . . . 149
4.20 Original and speckle filtered radar image . . . 150
4.21 Polar measuring principle and ALS . . . 153
4.22 DSM of part of Frankfurt . . . 154
4.23 Concept of laser ranging and scanning . . . 154
4.24 Multiple return laser ranging . . . 156
4.25 First and last return DSM . . . 157
4.26 Devegging laser data . . . 158
4.27 Vertical and oblique photography . . . 160
4.28 Vertical and oblique aerial photo of ITC building . . . 161
4.29 Effect of a different focal length . . . 162
4.30 Arrangement of photos in a typical *aerial photo block* . . . 163

5.1 Sensitivity curves of the human eye . . . 169
5.2 Comparison of additive and subtractive colour schemes . . . 170
5.3 The RGB cube . . . 170
5.4 Relationship between RGB and IHS colour spaces . . . 171

5.5 One-band and three-band image display . . . 172
5.6 Multi-band image display . . . 173
5.7 Anaglyph principle and stereograph . . . 174
5.8 Original–contrast enhanced–edge enhanced image . . . 176
5.9 Standard and cumulative histogram . . . 178
5.10 Linear contrast stretch versus histogram equalization . . . 179
5.11 Effect of histogram operations . . . 180
5.12 Input and output of a filter operation . . . 181
5.13 Filter kernels for smoothing . . . 181
5.14 Filter kernels for edge detection . . . 181
5.15 Filter kernel used for edge enhancement . . . 182
5.16 Original, edge enhanced and smoothed image . . . 182
5.17 Original Landsat ETM image of Enschede . . . 183
5.18 Image with line-dropouts . . . 184
5.19 Image corrected for line-dropouts . . . 184
5.20 Image with line striping . . . 185
5.21 Image with spike noise . . . 185
5.22 The problem of georeferencing an RS image . . . 190
5.23 Geometric image distortion . . . 191
5.24 The effect of terrain relief . . . 192
5.25 Illustration of relief displacement . . . 193
5.26 Image and map coordinate systems . . . 193
5.27 Original, georeferenced and geocoded image . . . 196
5.28 Illustration of different image transformations . . . 197
5.29 Schematic of image resampling . . . 197
5.30 Effect of different resampling methods . . . 198
5.31 Difference between DTM and DSM . . . 199
5.32 Illustration of the collinearity concept . . . 200
5.33 Inner geometry of a camera and the associated image . . . 201
5.34 The process of digital monoplotting . . . 202
5.35 Illustration of parallax in stereo pair . . . 203

6.1 RS image of Antequera area in Spain . . . 207
6.2 Mud huts of Labbezanga near the Niger river . . . 208
6.3 Example of an interpretation Manyara, Tanzania . . . 209
6.4 Comparison of different line maps . . . 212
6.5 Comparison of different thematic maps . . . 212
6.6 Two- and three-dimensional feature space . . . 214
6.7 Scatterplot of a digital image . . . 215
6.8 Distances in the feature space . . . 215

6.9 Feature space showing five clusters of observations . . . 216
6.10 The classification process . . . 216
6.11 Image classification input and output . . . 217
6.12 Results of a clustering algorithm . . . 219
6.13 Box classification . . . 220
6.14 Minimum distance to mean classification . . . 221
6.15 Maximum likelihood classification . . . 222
6.16 The mixed pixel . . . 225

7.1 Geodata processing . . . 228
7.2 Model characteristics and objective of study . . . 232
7.3 The modelling process summarized . . . 233

8.1 A continuous field example . . . 239
8.2 Geological units as a discrete field . . . 240
8.3 Geological faults as geographic objects . . . 242
8.4 Three regular tessellation types . . . 244
8.5 An example region quadtree . . . 245
8.6 Input data for a TIN construction . . . 246
8.7 Two triangulations from the same input data . . . 246
8.8 Examples of line representation . . . 248
8.9 An example area representation . . . 249
8.10 Polygons in a boundary model . . . 249
8.11 Example topological transformation . . . 250
8.12 Simplices and a simplicial complex . . . 251
8.13 Spatial relationships between two regions . . . 252
8.14 The five rules of topological consistency in 2D space . . . 253
8.15 Raster representation of a continuous field . . . 254
8.16 Vector representation of a continuous field . . . 255
8.17 Image classification of an agricultural area . . . 256
8.18 Image classification of an urban area . . . 256
8.19 Representations of a linear feature . . . 257
8.20 Geographic objects and their vector representation . . . 257
8.21 Overlaying different rasters . . . 258
8.22 Producing a raster overlay layer . . . 258
8.23 Examples of spatio-temporal phenomena . . . 260
8.24 Aerial surveys and satellite remote sensing . . . 263
8.25 Terrestrial surveys . . . 264
8.26 Satellite-based surveys enable efficient data collection in open areas . . . 264

8.27 Field workers are checking and collecting supplemental information in the field . . . 265
8.28 Mobile GIS provides mapping, GIS, and positioning integration to field users via hand-held and mobile devices . . . 266
8.29 Mobile updating strategies . . . 266
8.30 Manual digitizing techniques . . . 267
8.31 Main types of scanners . . . 267
8.32 The phases of the vectorization process and the various sorts of small error caused by it. The post-processing phase makes the final repairs . 268
8.33 Clean-up operations for vector data . . . 270
8.34 Successive clean-up operations for vector data . . . 271
8.35 Attributes are associated with features that have unique identifiers . . 271
8.36 The integration of two vector data sets . . . 273
8.37 Multiple adjacent data sets, after cleaning, can be matched and merged into a single one . . . 274
8.38 The integration of data sets into one common coordinate system . . . 274
8.39 Example relational database . . . 281
8.40 Example foreign key attribute . . . 283
8.41 The two unary query operators . . . 283
8.42 The binary query operator . . . 285
8.43 A combined query . . . 286
8.44 Raster data and associated database table . . . 287
8.45 Vector data and associated database table . . . 288
8.46 Geometry data stored in spatial database . . . 288
8.47 Schematic representation of and SDI . . . 291
8.48 Webservices-base SDI architecture . . . 292
8.49 SDI node architecture and communication patterns . . . 295
8.50 Good/bad accuracy against good/bad precision . . . 298
8.51 The positional error of a measurement . . . 299
8.52 A normally distributed random variable . . . 300
8.53 Normal bivariate distribution . . . 300
8.54 The ε- or Perkal band . . . 301
8.55 Point-in-polygon test with the ε-band . . . 301
8.56 Crisp and uncertain membership functions . . . 302
8.57 Common variogram models . . . 308
8.58 Ordinary kriging . . . 311

9.1 Centroid . . . 316
9.2 Minimal bounding boxes . . . 317
9.3 Interactive feature selection . . . 318
9.4 Spatial selection through attribute conditions . . . 319

9.5 Further spatial selection through attribute conditions . . . 319
9.6 Spatial selection . . . 321
9.7 Two classifications of average household income per ward . . . 323
9.8 Example discrete classification . . . 324
9.9 Two automatic classification techniques . . . 325
9.10 The polygon overlay operators . . . 326
9.11 The residential areas of Ilala District . . . 327
9.12 Examples of arithmetic map algebra expressions . . . 328
9.13 Logical expressions in map algebra . . . 329
9.14 Complex logical expressions in map algebra . . . 330
9.15 Examples of conditional raster expressions . . . 330
9.16 The use of a decision table in raster overlay . . . 331
9.17 Buffer zone generation . . . 333
9.18 Thiessen polygon construction from a Delaunay triangulation . . . 333
9.19 Diffusion computations on a raster . . . 334
9.20 Flow computations on a raster . . . 335
9.21 Slope angle defined . . . 337
9.22 Slope angle and slope aspect defined . . . 338
9.23 Part of a network with associated turning costs at a node . . . 340
9.24 Ordered and unordered optimal-path finding . . . 340
9.25 Network allocation on a pupil/school assignment problem . . . 341
9.26 Tracing functions on a network . . . 342
9.27 Error propagation in spatial data handling . . . 343

10.1 Maps and location . . . 348
10.2 Maps and characteristics . . . 349
10.3 Maps and time . . . 349
10.4 Comparing aerial photograph and map . . . 350
10.5 Topographic map of Overijssel . . . 351
10.6 Thematic maps . . . 351
10.7 Dimensions of spatial data . . . 352
10.8 Cartographic visualization process . . . 353
10.9 Visual thinking and communication . . . 356
10.10 Cartographic communication process . . . 357
10.11 Bertin's six visual variables . . . 359
10.12 Qualitative data map . . . 361
10.13 Two wrongly designed qualitative maps . . . 361
10.14 Mapping absolute quantitative data . . . 362
10.15 Two wrongly designed quantitative maps . . . 362
10.16 Mapping relative quantitative data . . . 363

10.17 Bad relative quantitative data maps . . . 364
10.18 Visualization of the terrain . . . 365
10.19 Quantitative data in 3D visualization . . . 365
10.20 Mapping change . . . 366
10.21 Paper map and its information . . . 367
10.22 Text in the map . . . 368
10.23 Visual hierarchy . . . 368
10.24 Enschede in Google Earth . . . 370
10.25 Enschede in openstreetmap . . . 371

11.1 Changing vegetation spectra as a function of LAI . . . 376
11.2 Earth observation variables and their meaning for users . . . 377
11.3 Interactions between observation models and process models . . . 378
11.4 Generic image simulation system . . . 379
11.5 Surface spectra under different directions . . . 380
11.6 Linear dependance: two observables and two surface properties . . . 382
11.7 Temporal and spatial scales of some Earth system processes . . . 383
11.8 Difference in grid spacing and orientation . . . 385
11.9 Course of local solar time of observation near the Equator for NOAA satellites . . . 385
11.10 Spectral response functions for the ASTER and MODIS sensors . . . 386
11.11 Outlier removal and curve fitting . . . 391
11.12 Global NDVI dynamics for the year 1995 . . . 393
11.13 Variation of R, G and B as a function of the phase angle P . . . 393
11.14 Global yearly vegetation dynamics . . . 394
11.15 Global trends in mean NDVI etc . . . 395
11.16 Significant correlation coefficients . . . 396
11.17 Vegetation dynamics in 2002 of the Alps and surroundings . . . 396
11.18 Synthesized cloud-free time series of images . . . 398
11.19 Parallel usage of GIS and spatial-dynamic models . . . 399
11.20 Location of the Nam Chun watershed . . . 401
11.21 ASTER image (3D representation) of the Nam Chun watershed . . . 402
11.22 Simplified flow chart of the LISEM model . . . 403
11.23 DEM used in LISEM model . . . 403
11.24 Measured and simulated discharge in Nam Chun catchment . . . 406
11.25 Spatial and temporal distribution of surface runoff . . . 407
11.26 Predicted hydrograph for different land use scenarios . . . 409
11.27 Spot heights and contour lines of the Nam Chun floodplain area . . . 410
11.28 DEM of the Nam Chun floodplain area . . . 410
11.29 Land cover types of the Nam Chun floodplain area . . . 411

11.30 Boundary condition for Nam Chun upstream . . . 413
11.31 Spatial distribution of maximum water depth . . . 415
11.32 Spatial distribution of maximum flow velocity . . . 416
11.33 Flood hazard mapping . . . 418
11.34 Lake Urmiyeh and its watershed . . . 419
11.35 Logical structure of the Lake Uromiyeh DSS . . . 420
11.36 Data flow to the spatio-temporal database of the DSS . . . 421
11.37 Precipitation maps of wet and dry hydrological years . . . 422
11.38 Data flow in the Earth Observation . . . 423
11.39 Surface energy balance calculations . . . 424
11.40 Current water resources and users in the Ghadar Chai basin . . . 424
11.41 Future water resources and users in the Ghadar Chai basin . . . 425

12.1 Systematic approach to the design of a new product . . . 428
12.2 An example of a car navigation system . . . 430
12.3 A route planned with the help of Google Maps . . . 432
12.4 Personal geoidentification . . . 433
12.5 Optimal routing for transportation of petrol derivates . . . 436
12.6 Netherland's worst flooding . . . 440
12.7 Dutch Deltaworks . . . 441
12.8 DSM example . . . 442
12.9 Flood depth in the absence of dikes . . . 443
12.10 Land cover classification of the Binahaan river area . . . 444
12.11 Evacu-Aid tool . . . 446
12.12 Flood early warning and evacuation plans . . . 446
12.13 Sea level rise based on satellite radar altimetry . . . 448
12.14 Tsunami damage in Banda Aceh, Indonesia . . . 449
12.15 Hard and soft barriers along the coast . . . 450
12.16 Elevation map of the Netherlands. . . . 451
12.17 The Dutch ecological network . . . 452
12.18 Reflectance profiles of salt-marsh vegetation types . . . 453
12.19 Vegetation structure map in support of mapping the hen harrier habitat quality . . . 455
12.20 Chlorophyll mapping in a degraded mangrove area . . . 455
12.21 Interpretation lines on the Aerial photograph . . . 460
12.22 The cover of images used for the final classification . . . 461
12.23 The Garlyansko Zhdrelo Gorge in the Osogovo Mountains . . . 464
12.24 The Osogovo Mountains . . . 465
12.25 The Dutch spatial planning portal . . . 468
12.26 Part of the Polish road network . . . 473

12.27 Suitability maps for the Via Baltica route 474
12.28 Government preferred route versus ecology vision route 475
12.29 Lake Champlain and the St. Albans Bay and its watershed 477
12.30 A raster map of the watershed 478
12.31 Sources of phosphorus loading 478
12.32 15 year scenario runs with the model 478
12.33 Google trends analysis of key words 480
12.34 A touchgraph facebook map 482

List of Tables

1.1 Environmental policy actions and reactions 57
1.2 Information requirements for societal benefit areas 69

3.1 Three global ellipsoids 97
3.2 Transformation of Cartesian coordinates 112
3.3 Transformation from the Potsdam datum 112
3.4 Magnitude of errors in absolute satellite-based positioning 119

5.1 Example histogram in tabular format 177
5.2 Summary histogram statistics 177
5.3 Sample set of ground control points 195

6.1 Made-up example of an interpretation legend 210
6.2 Sample error matrix 223
6.3 Spectral, land cover and land use classes 224

8.1 Raster and vector representations compared 277
8.2 Spatial data representation 279
8.3 Three relation schemas 281
8.4 A simple error matrix 303

9.1 Example continuous classification table 323
9.2 Common causes of error in spatial data handling 343

10.1 Data nature and measurement scales 358
10.2 Measurement scales linked to visual variables 360

11.1 Scales of RS observations 384
11.2 Input data for LISEM 404
11.3 Observed and simulated peak discharge in Nam Chun catchment 405
11.4 Summary of change in peak runoff and their arrival time 408
11.5 Manning's roughness coefficient 412

11.6 Summary of flood characteristics on different scenarios with 2 years return period . . . 412
11.7 Summary of flood characteristics on different scenarios with 20 years return period . . . 414
11.8 Surface area per maximum water depth class with 20 years return period 414
11.9 Surface area . . . 416

12.1 Forest types . . . 462
12.2 Visions, themes and their weights in the Via Baltica corridor study . . . 473
